

Tabletop Rocker Pad

Small but powerful control for lighting and miscellaneous electric loads. The Verve Tabletop Rocker Pad uses EnOcean radio frequency technology to communicate wirelessly with other Verve devices and provide convenient control of lighting and miscellaneous electric loads. The rocker pads are self-powered and never require batteries because the simple act of pressing the rocker generates enough kinetic energy to send a signal to other Verve devices. Use them in conjunction with Verve sensors and controls to maximize efficiency and provide a level of comfort and convenience you cannot achieve with traditional switches. Verve products feature clean contemporary styling, making them an attractive addition that's sure to compliment any décor.

Features & Benefits

- Communicate wirelessly with other Verve devices using EnOcean radio frequency technology.
- Wireless - Simply place them on a table, counter or desk for convenient control of lighting and electric loads.
- Self-powered - no batteries to replace and no on-going maintenance.
- Optional mounting plate can be used to install on a wall for more permanent placement.
- Decorator style rocker pads capable of performing switching and dimming functions.
